

Using FDA Enforcement Data To Get FDA-Inspection Ready

Oliver Yu, CTO

FDA Enforcement Data Enables You To:

- Allocate the right resources to the right areas
- Justify additional resources
- Identify key trends / insights

Today

- Big picture data
(WL, Inspections, 483s, inspectors)
- Will Trump Impact FDA Enforcement?
- Case Studies – go deeper

DRUG GMP WARNING LETTERS SKYROCKETED IN 2016

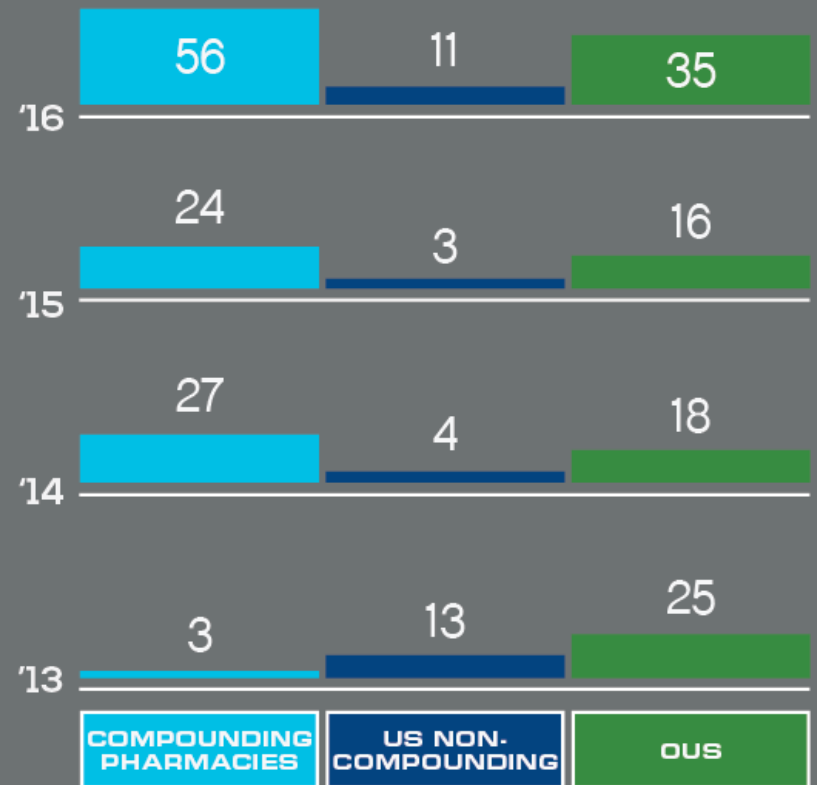

TOTAL LETTERS

In the Past 4 Years

A CLOSER LOOK:

Drug GMP Warning Letters by Kind

All major categories of Warning Letters skyrocketed, more than 2X.

A CLOSER LOOK AT CASE STUDIES BY REGION

China experienced a dramatic explosion of warning letters. This is similar to what happened to India a few years back with the same FDA Investigator, Peter Baker, heavily involved.

HOW DATA INTEGRITY PLAYS A HUGE ROLE:

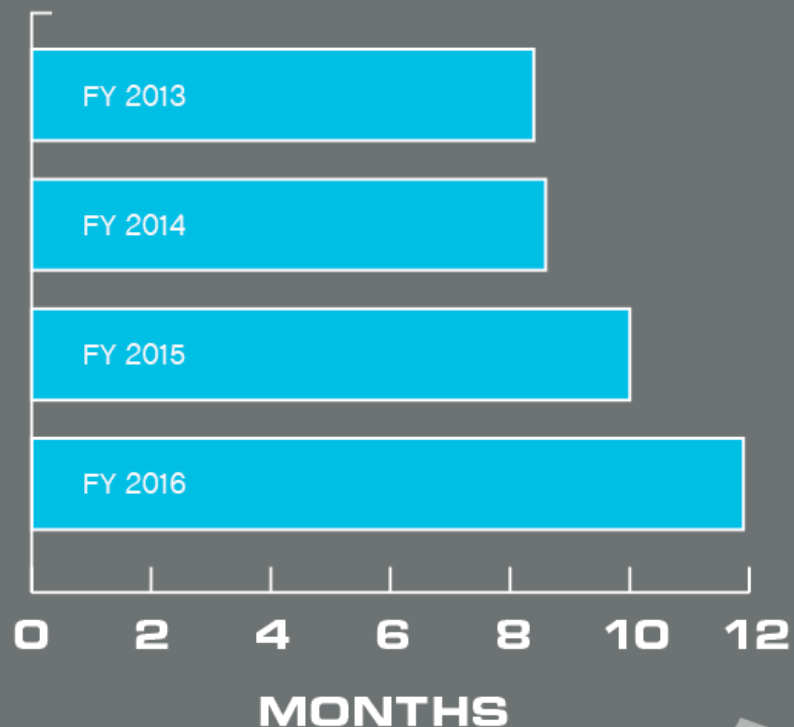

Data Integrity is the BIG ISSUE for these warning letters - and not just for foreign sites anymore. The US has essentially "caught up" (in a bad way)

IT'S NOW TAKING THE **FDA LONGER** TO GET THESE WARNING LETTERS

Almost a year from the
time they finish inspecting
a facility.

**10.4
MONTHS**

**5.4
MONTHS**

IT TAKES ABOUT
HALF AS LONG
FOR THE FDA TO
ISSUE AN **IMPORT
ALERT** VERSUS A
WARNING LETTER

Average Pharma 483s/Year

Oneway Analysis of Num Pharma Inspections By Political Party

43% of variability in Number of Pharma Inspections can be explained by the Political party that appoints the FDA commissioner

Excluded Rows 1

Oneway Anova

Summary of Fit

Rsquare	0.472676
Adj Rsquare	0.43501
Root Mean Square Error	157.7811
Mean of Response	2791.563
Observations (or Sum Wgts)	16

t Test

R-D

Assuming equal variances

Difference	-288.63	t Ratio	-3.54248
Std Err Dif	81.48	DF	14
Upper CLDif	-113.88	Prob > t	0.0032*
Lower CLDif	-463.39	Prob > t	0.9984
Confidence	0.95	Prob < t	0.0016*

This 43% is statistically significant.

The probability of finding this result by random chance alone is **less than 3 in 1000**

The magnitude of difference is 2,600 vs 2,900.

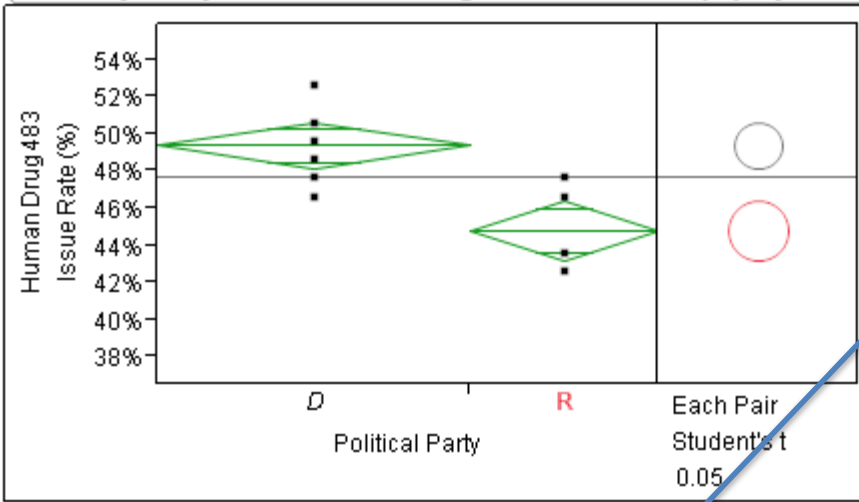

Means for Oneway Anova

Level	Number	Mean	Std Error	Lower 95%	Upper 95%
D	10	2899.80	49.895	2792.8	3006.8
R	6	2611.17	64.414	2473.0	2749.3

Std Error uses a pooled estimate of error variance

Bottom Line: 10% reduction in inspections

Oneway Analysis of Human Drug 483 Issue Rate (%) By Political Party

59% of variability in Issue Rate of 483s to Drug companies can be explained by the political party that appoints the FDA commissioner

Excluded Rows 1

Oneway Anova

Summary of Fit

Rsquare	0.613667
Adj Rsquare	0.586072
Root Mean Square Error	0.018753
Mean of Response	0.476875
Observations (or Sum Wgts)	16

t Test

R-D

Assuming equal variances

Difference	-0.04567	t Ratio	-4.71573
Std Err Dif	0.00968	DF	14
Upper CLDif	-0.02490	Prob > t	0.0003*
Lower CLDif	-0.06644	Prob > t	0.9998
Confidence	0.95	Prob < t	0.0002*

This 59% is statistically significant.

The probability of finding this result by random chance alone is **less than 3 in 10,000**

The magnitude of difference is 49% vs 45%

Means for Oneway Anova

Level	Number	Mean	Std Error	Lower 95%	Upper 95%
D	10	0.494000	0.00593	0.48128	0.50672
R	6	0.448333	0.00766	0.43191	0.46475

Std Error uses a pooled estimate of error variance

Bottom Line: **10% rate of 483 issuance to drug companies**

WHAT TO EXPECT FOR 2017

Continued focus OUS where most generic drugs are made.

The continued balancing act between enforcement actions and drug shortages.

Continued increase, both US and OUS, of failures in the area of data integrity.

We'll see more of the same, but the political climate may suggest a diminished enforcement environment (ala the GWBush era).

Intervals between inspections and WL continue to increase, import alerts are on average issued in the $\frac{1}{2}$ the time of a WL.

WHAT TO EXPECT FOR 2017

Compounding pharmacies and outsourcing facilities do not appear to be turning the corner on compliance here....almost like they are clueless and not paying any attention.
